

# Problem of the Month:

## August 2020

$C_3H_5Br$  measured in  
„Acetone-d<sub>6</sub>“

$^1H$  NMR spectrum  
recorded at 250.13 MHz

© Dr. Rainer Häfner, 2020

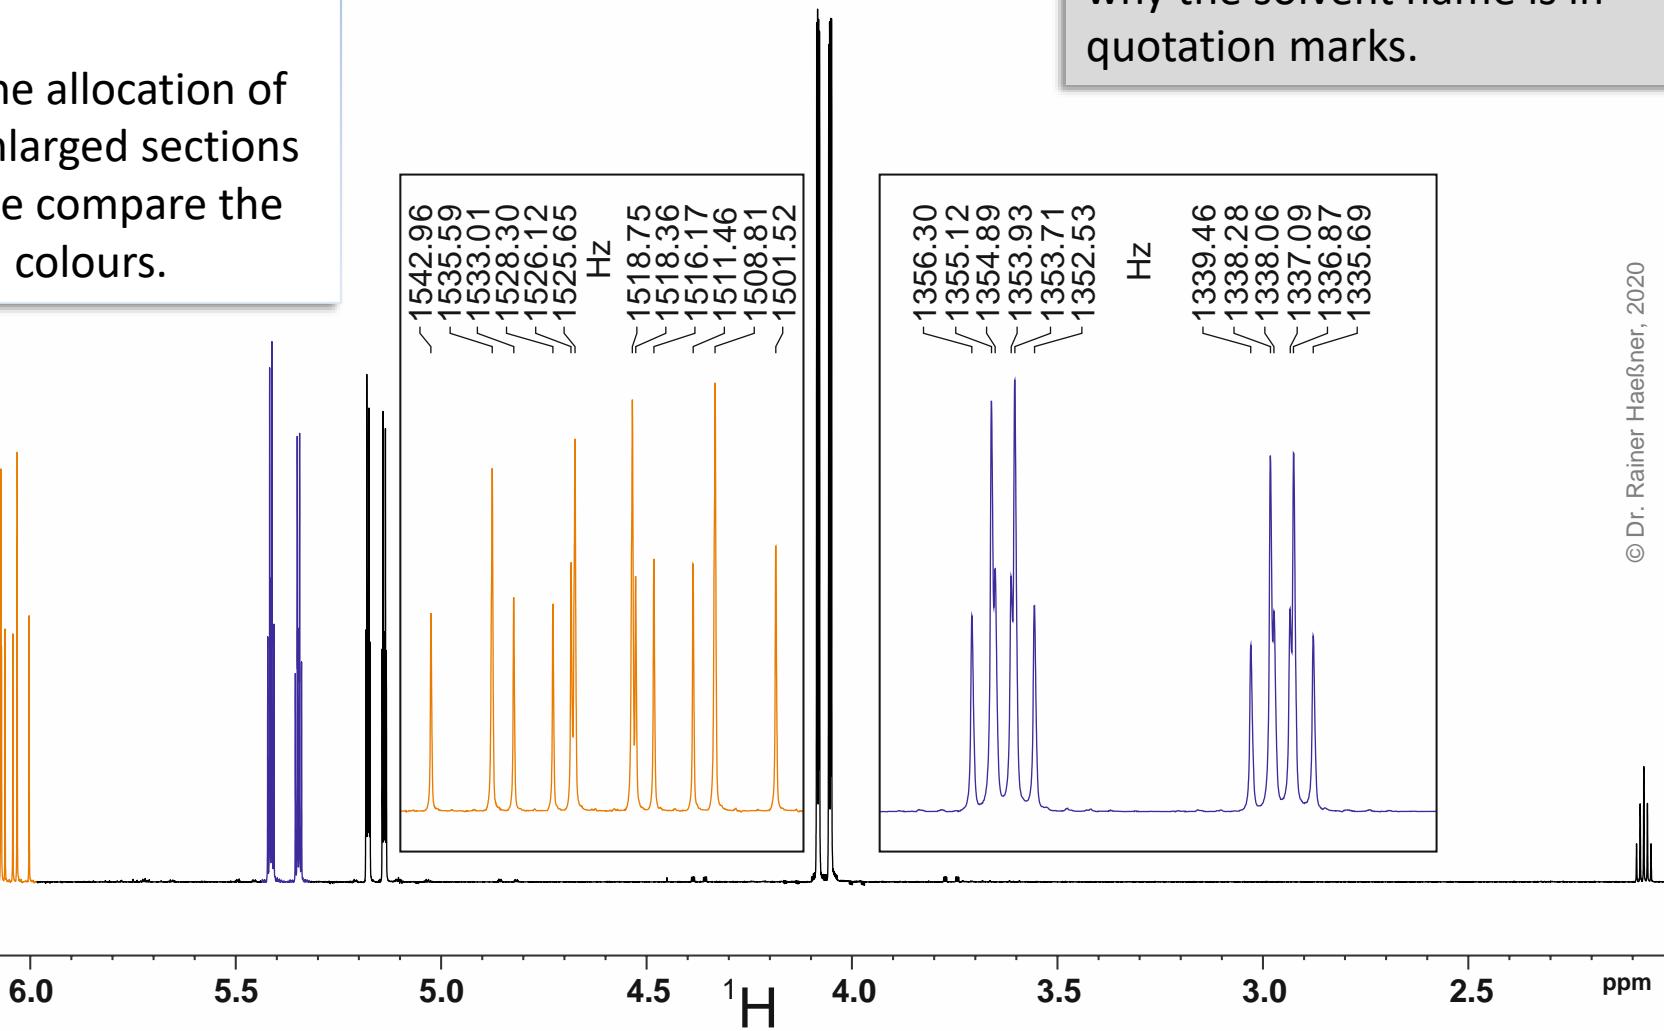

# Problem of the Month:

## August 2020

Same proton NMR as  
on the previous page.

For the allocation of  
the enlarged sections  
please compare the  
colours.

Remark: There is a reason  
why the solvent name is in  
quotation marks.

# Solvent signals within the carbon NMR spectrum (the solvent signal within the proton area is labelled in green)

Analyze the red, blue, orange and green (proton spectrum) multiplet. Each multiplet arises from a specific solvent molecule isotopologue; which?
